

HUGO BECK at Ipex 2010 in Birmingham

Hall 18 - Stand F866

Hugo Beck will be demonstrating a range of film wrapping and mailing machines ideally suited for use by the trade binder, bindery or mailing house..

For over 50 years Stuttgart based Hugo Beck have developed and manufactured the most modern print processing and film packaging machines, as well as peripheral devices. Their products are designed specifically for use within the print and publishing markets.

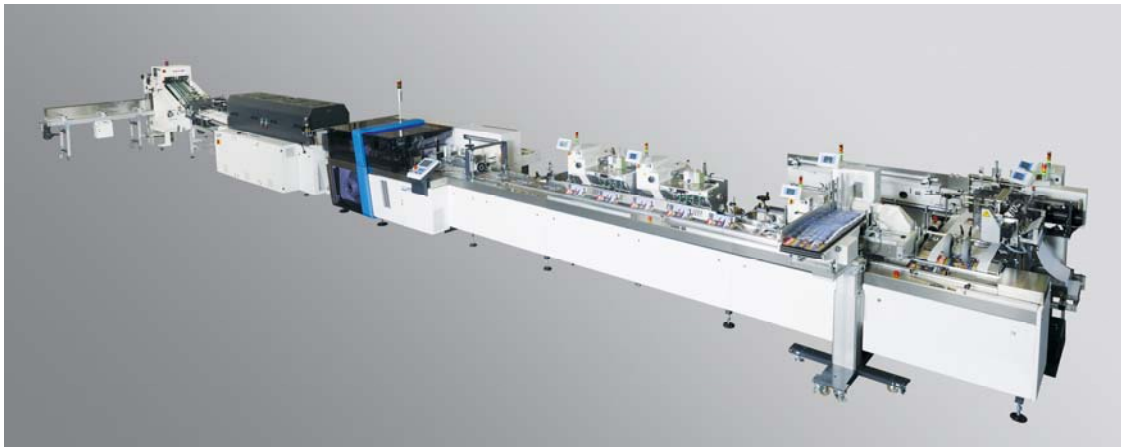

On their stand they will be running **Mailline**, a versatile, fast and flexible finishing tool. It can be configured for a wide range of applications including glueing, attaching, labelling, opening, folding, inserting, addressing and inkjetting. One friction feeder will feed a fold-envelope, another will attach a card onto the inside of this envelope before it is folded and closed, ready for personalising on the same equipment. The output of this versatile finishing line is 15,000 products/hr.

All Hugo Beck feeders are equipped with servo motors and are moveable so that they can be placed as autonomous units at any position of the manufacturing line or at any other machine.

Mailline, the perfect versatile finishing line

Also on show and being demonstrated will be a film wrapping machine - **servo X** – capable of output of up to 10,000 products/hr. The servo X belongs to the new machine generation of Hugo Beck, more ergonomic, flexible and simpler to operate. The servo X is available in various configurations featuring: product infeeding with unequal gaps or various product lengths, packaging of single or stacked products, co-pilot function for easy set-up of the complete machine with product data memory, servo drives for continuous operation, improved service and maintenance friendliness.

Finishing line with flexible feeding systems
